

Organic Clothing

Description:

Saf Clothing is a new fashion range designed to be of the highest quality, whilst meeting the highest environmental and ethical standards. Saf is doing something different. We are fully transparent and want to educate people about the benefits of organic clothing. With Saf you have purer, cleaner fabric and a comfortable, durable, well-finished garment. Conventional cotton farming is one of agriculture's most environmentally destructive activities. It takes an enormous toll on the earth's air, water, and soil, and significantly affects the health of people living in cotton growing areas. A typical conventional cotton t-shirt uses about 150 grams of acutely toxic pesticides and insecticides; that's the size of a cup of sugar. (source: Soil Association). A Saf garment uses none.
